

PROLIMIT BRAND STORY PLT. EST. 1980

FOUNDED IN 1980, BUILDING QUALITY PRODUCTS WHICH ARE BETTER THAN YOU EXPECT THEM TO BE!

Prolimit was started out of the desire to create products, which are made to perform! Product driven development and with a history and knowledge of decades. We have been challenging product since 35 years.

Prolimit was founded in the Netherlands. From there we are represented in every single country in the world.

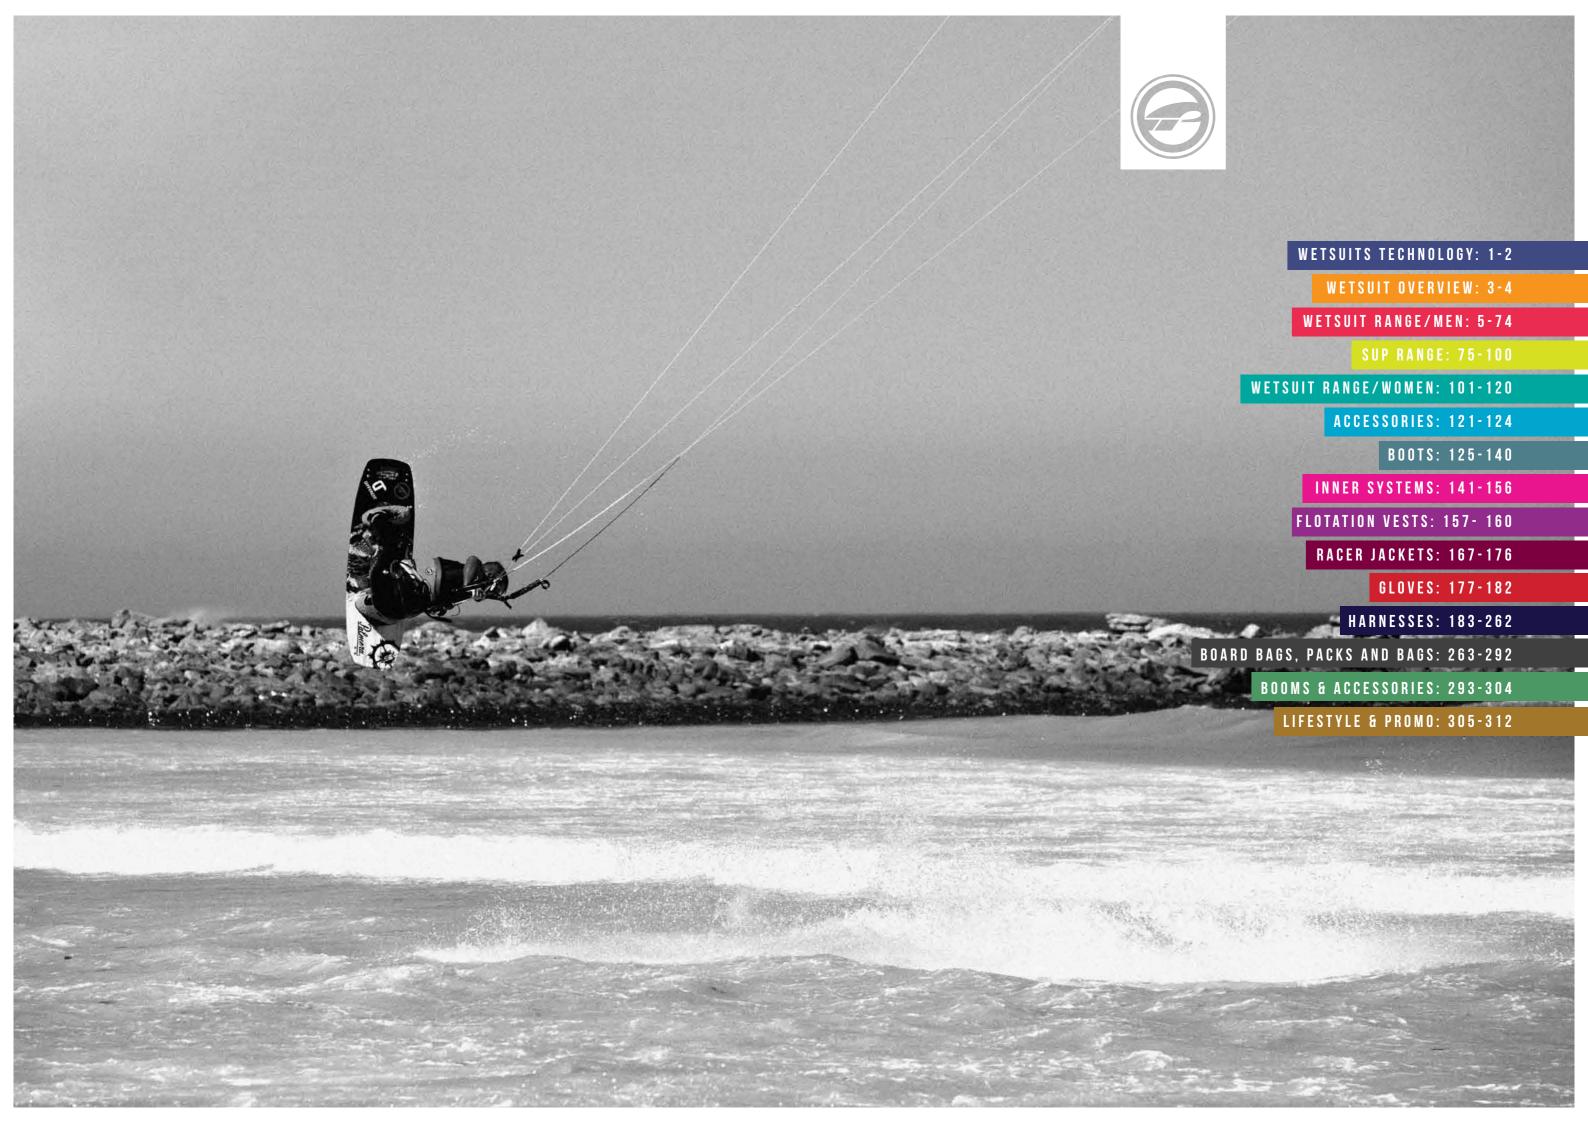

Prolimit created champions in windsurfing and kiteboarding and many of the best atheletes in the world have found a fertile ground when it comes to working with the best product available.

Looking back we are proud that so many young careers started when these promising athletes realized they needed the best possible product to excel. Our product engineering is being led by our headoffice in the Netherlands in close cooperation with our R&D and design office in Cape Town,

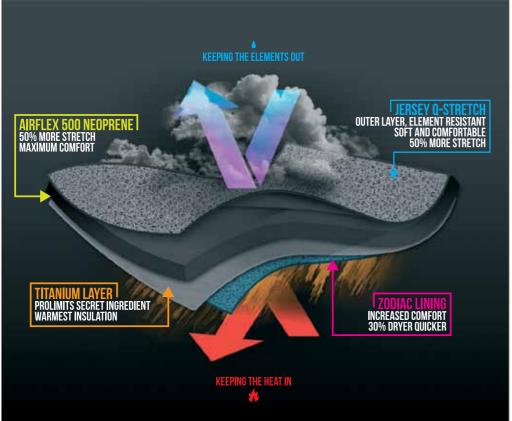

South Africa. Talented designers joined our team and in the challenging conditions of the South African coastline we could spend even more time on the water in all seasons while keeping the unique northern testing grounds in the Netherlands as well for sub zero conditions. We also teamed up in our quest for the best possible product with experts from the USA and Taiwan for seam technologies, which we now use in every single product and have created long lasting and durable relationships with the best factories abroad.

We promise you, every single Prolimit product is better than you expect it to be!

WWW.PROLIMIT.COM

NEOPRENE IS A VERY SPECIFIC MATERIAL.

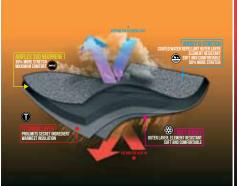

YOU CAN BUILD A PRODUCT FROM IT. MANY PEOPLE LOOK AT A WETSUIT FROM A MARKETING STANDPOINT AND JUDGE ON ITS COLOR AND PRINTS. THERE IS MORE TO IT.

Today's Prolimit neoprene is PAH free. Means we have achieved to ban the use of extender oils in our neoprene sheets for a better environment and an even better technical characteristics of the materials in weight, stretch and to prevent skin irritation sometimes caused by extender oil resedues.

Neoprene is a blown rubber laminated with a lining made out of nylon, polyester or any other fabric. The amount of air in the rubber determines the stretch of the neoprene which is the fundament of the neoprene sheet. The laminated materials is the material which is determining the stretch and the amount of stretch but even more important the direction of the stretch. Our neoprene is made out of limestone which is a rock that is remarkably free from impurities.

This allowed us to develop suits without using oil based neoprene. This neoprene also allowed us to create lightweight suits with an exceptional thermal insulation, with higher stretch, which are easier to take on and off, which reduce drag and increase speed and which is making our suits more buoyant for above watersports usage.

The maximum of elongation of our neoprene is close to 500% and human skin stretches to around 70% making our wetsuits the most free moving wetsuits available. Precise seam placements are giving our wetsuits the exact fit without using the stretch of the neoprene to fit to your body. Most wetsuits use less seams which requires the neoprene to stretch to adapt to your body which is minimizing the insulation. Prolimit is using different neoprene types for different usage, different wear and stress areas and different price segments.

PROLIMIT SEAM TECHNOLOGY.

PROLIMIT IS USING DIFFERENT SEAM TECHNOLOGIES TO REACH THE REQUIREMENTS LAID DOWN FROM THE DESIGN TEAM AND OUR CUSTOMERS

www.prolimit.com

POWERSEAM, DOUBLE

A unique technology! Used for the sixth consecutive year in our C7 wetsuits. Colored thin slick looking seams are triple glued and sealed off on both sides with a liquid rubber seal. The liquid seal reinforces the seams and prevent any water leakage. Our Stitchless wetsuit construction.

The advantage: Thin, colored, high wear resistant, watertight, super stretch seams and the ability to use it on skin surfaces.

POWERSEAM, SINGLE

Triple glued seams with the outside of the seam sealed by a wider colored liquid rubber seal. Creating a high durable watertight stretch seam. The inside of seam is protected by our glued and blind stitched technology. The looks and benefits of our Powerseam combined with blind stitched inside technology of our wetsuits.

The advantage: High wear resistant, watertight, super stretch seams and the ability to use it on skin surfaces.

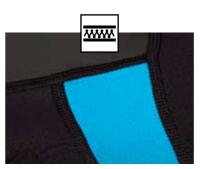

FTM SEAM

FTM our Fluid Taping Method. Triple glued seams with the outside of the seam sealed of by a wider black carbon neoprene seal. The inside of seam is protected by our glued and blind stitched technology. FTM seams durable, watertight and high stretch.

GLUED AND BLINDSTITCHED SEAMS

Triple glued panels are stitched together with a special stitching method. Partially puncturing the neoprene to keep the water tightness of the seam/wetsuit. Each thread is protected by a tape at the end. Our perfect finish makes our glued and blind stitched wetsuit undestroyable!

FLATLOCKED SEAMS

Flatlock seams are used on summer suits and rashquards. The seam has an open, sort of wire on, flat stitch. This is used to join the glue less panels.

ICE	- 1	COLD	-1	COOL	1	WARM	1	TROPIC

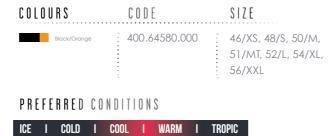

The Prolimt SUP Top Convertible 1.5mm is the most versatile top for your paddle sessions. It can be used as a zipped up top with front wind block for colder air, and can then be unzipped for a loose fit and front ventilation as you warm up. While unzipped, it supplies cross-ventilation from the front to the back mesh panels. Made from our PO2 fabric; Prolimit's quick dry non absorbing fabric. The panels under the arms are made of a thinner version of the PO2 fabric for more movement and breathablility.

- PO2 fabric
- Flatlock construction
- Front ventilation panel for maximum breathability
 Features two zipper positions for heat regulation
- YKK zipper

SUP TOP LOOSEFIT SPLASH PU

The Prolimt SUP top Loosefit Splash is the top for your cold paddle sessions. Features a PU coated outside for warmth and complete windblock. Prolimit's Airmax vented side panels for a snug fit and heat regulation. The elastic waistband keeps the top in place while paddling. A full-length YKK zipper regulates airflow through the jacket when needed.

- PU coated for windchill protection
- Flatlock seams
- Heat optimized
- Plush lining
- Airmax vents
- UPF 50+
- Sticky elastic waist band
- Full-length zipper

BOOTS & SHOES

NOT JUST NEOPRENE FOOT PROTECTION ORTHOPEDIC CONTROLED ENGINEERING!

Boots and Shoes are an important part of our product range. For 35 years Prolimit has been developing boots and shoes with a facus on innovation, perfect fit and introduced many innovations which has become a standard for the entire industry.

WWW.PROLIMIT.COM

FTM SEAM

BOOTS & SHOES

PROLIMIT CREATED THE OCL LAST TECHNOLOGY, (ORTHOPEDIC CONTROLED LAST).

THE ADVANTAGE: BETTER FITTING FOOTWEAR THAN ANYTHING AVAILABLE ON THE MARKET!

History: By adding in more seam shape in our boots& shoes we found out that it did not gave us better fit. The reason; we were using the same last as all our competitors! The Alloy casted lasts determines the shape and fit of neoprene footwear. A neoprene sock is mounted around the last and rubber parts are joined together. The last goes into the oven for the rubber parts to cure, moulding all exactly around the last.

Solution: Realizing this we started the search for a better last. We found out that there are no lasts made for active water sports . All lasts available in the market are made for multi purpose usage; like for waders boots or fishing purposes which are static shaped profiles.

That made us to decide to built the best last possible for active water sports. Together with a Orthopedic specialist we analyzed different feet and came up with complete new last designs. In the design we incorporated the stretch of the materials, water influence and the dynamic positions of the feet during active water sport. Your feet are made of 26 bones and 214 ligaments! They need proper support! Also during active water

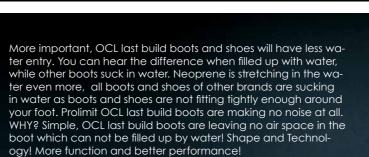

OCL LASTS IS DIFFERENT!

Most of the Prolimit boots and shoes are built using our unique, Prolimit owned, OCL (Orthopedic Controled Last). Nobody in the entire industry made the same effort to go this far! We created the best SHAPE and TECHNOLOGY in a neoprene boot or shoe.

- Shaft is more raked back for the Dynamic position,
- The heel of our OCL lasts are much narrower closing nicely around your Achilles tendon and supporting it,

SWEPT FOOT PROFILE

- Our arch is lower to prevent rolling of the boot around your foot,
- Our sole foot arch is pre shaped to fit the natural position of the foot which is not flat

While all other brands in the market are using lasts made from fishing boots Prolimit took the effort to create something which is noticeable when using. We challenge you, do the test yourself!

- PROLIMIT OCL LAST

PREDATOR BOOT FTM 6/5 ARMOURED

PROLIMIT | 2016

High performance boots; built with our Armoured Aramid sole. This sole is super strong and resistant against sharp mussels, coral reef and other sharp objects. Built on our OCL last for better fit and performance.

- GBS, Glued and Blindstitched watersealed seams
- FTM sealed watertight seams
- Easy entry Velcro system
- DCS direct contact sole
- OCL Last, perfect fit.
- Our unique orthopedic last • Armoured aramid sole,
- against any sharp objects • Segmented Torsion sole, maximum
- of flexibility • Super Grid Low stretch neoprene around
- the foot for extra stability

INNERSYSTEMS

Neoprene wetsuits have remained unchanged since its original concept. This concept being a thin layer of water insulated between your body and the wetsuit. Body temperature is transferred into this water and insulted from surrounding weather conditions. Seals on cuffs, collar and zipper ensure that an excess of water does not enter the wetsuit.

The human body loses heat largely through conduction and convection. The rate of heat loss depends on the wind speed over the surface, the faster the wind speed, the more readily the surface cools. By using a 1st layer (innersystem garment), water will remain against your skin and resist excess water entering. Added thickness and insulation contributes to extra warmth and wind-chill will have a minimal cooling effect. Comfort and manoeuvrability will also increase as the wetsuit and innersystem garment slide frictionless over each other.

PROLIMIT INNERSYSTEMS are made out of thin Limestone based neoprene. A high heat reflective Titanium layer optimizes heat retention.

- Ergonomic fit and stretch for ease of movement.
- Engineered body shaping follows the body curves to retain body heat.
 A variety of materials are used, specifically utilized in different parts of the garment.

SHAPE AND TECHNOLOGY

MAKES OUR PRODUCT UNIQUE

Everyone says they are unique, nobody can beat these features.

 Prolimit waist harness are CAD designed around an anatomically 3D model. This gives no matter where the pull goes, perfect pressure distribution, more comfort and rock solid stability.

- Pre-curved and 3D shaped inner plates. Ensures a true 3D shaped harness! Our unique combo profile. (insert icon)
- "A BELT SYSTEM WHICH IS DIFFERENT FROM ALL OTHER SYSTEMS"
- "More comfort, grip, flexibility and tension."

Our UNIQUE BELT system can be confusing the first time you get

to use it! We know, but the advantages are so big! Remove the VELCRO TAB cover before use. The use of our system is written on this tag and a silent salesman.

- High mechanical grip. The neoprene belt gives high mechanical grip completely around your waist. No riding up of the harness
- Flexible to adapt to your body. The neoprene belt follows the curves of your waist perfectly
- Highest freedom of movement and comfort. The neoprene belt gives maximum comfort, maximum freedom of movement.
- Even tension around your waist. The evenly tension around the waist avoids discomfort.
- Our Unique patented spreader bar system; "click and go". PROLIMIT patented PIN RELEASE BAR used on all harnesses, it allows quick fitting of our harness.

No threading of webbing is necessary and buckle setting stay the same. Just CLICK AND GO. Perfect and trouble free release in every condition and added safety.

WE USE FOR WINDSURF AND KITESURFING DIFFERENT BAR SYSTEMS

- WINDSURFING: Pin release Spreader bar: Open bar with twist release hook shape for safety.
- KITEBOARDING: STUMP NOSE Pin release SPREADER bar. The STUMP NOSE spreader bar combats unwanted unhooking from unusual pull directions like riding toe side.
- PROLIMIT FAT BAR; An over-sized and heavy duty Pin release Spreader bar. The fat bar gives an even more twist resistance for free-style freaks, gives added safety and shows how strong a bar can be. Used on our high back support harnesses.
- PROLIMIT Duracore belt. Undestroyable, Duracore heavy duty webbing to hold the extreme loads, always! Safety belt quality out of the car industry. Nothing can beats this durability.
- Slide in Bar pad system an integrated bar pad system UNIQUE and industry first on kite harness. The Slide in bar pad system is integrated with the harness body and gives the perfect 360 degrees harness. Encircling the body and protects the ribs and sternum from spreader bar pressure during the huge vertical pull experienced when doing extreme moves or bodydragging. It locks the spreader bar in place making it impossible for the bar to ride up on its own.

PROLIMIT INNOVATIONS ARE UNIQUE AND INDUSTRY FIRST WHICH
MAKE OUR HARNESS THE BEST IN THE MARKET

ENVY HARNESS

PROLIMIT | 2016

Girls waist harness for day to day use in all disciplines. Lots of freedom of movement. Redesigned around an anatomically correct female CAD model, it is the most comfortable and stable girls harness out there. Full wrap neoprene edges ensure comfort and no chafe, even without a wetsuit.

- Pre-curved and 3D shaped.
- 4 Point connected Unique Neoprene belt
- High mechanical Grip construction belt, no riding up!
- Wave outline profile.
- Patented Pin Release PLT bar System.
- Internal load plate Mark I
- DuraCore webbing, tough and durable straps

	•	•

Girls seat harness for racing and free-ride. Redesigned around an anatomically correct female CAD model, it offers the most stability and support in a girls seat harness. The double buckles give good tension spread and adjustment of where the power from the sail can be directed into the harness body.

- True 3D seat shaping.
- Elastic slalom belt closure
- Racing optimized outline profile.
- MPL Quad belt attachment.
- cushioned quick release/half release leg straps
- Patented Pin Release PLT bar System.
- DuraCore webbing, tough and durable straps

BLUE / BLACK: 404.61100.020

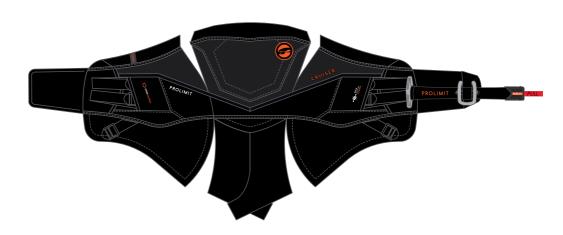

RAMBLER HARNESS

Freerace/racing harness. It has a medium high profile for support and allows maximum sail power to be carried at all times. The double buckles combined with the high profile allows a big adjustment of where the power from the sail can be directed into the harness body.

- True 3D seat shaping.
- Elastic slalom belt.
- Cruising optimized outline profile.
- MPL Quad belt attachment.
- Patented Pin Release PLT bar System.
- cushioned quick release/half release leg straps
- Internal load plate
- Back support control system
- DuraCore webbing, tough and durable straps

BLUE / BLACK: 404.51000.010

CRUISER HARNESS

Cruising and Freerace harness. It has a high profile with big back support for sailors who get out there for hours and cover long distances. It combines high back support with solid spreader bar stability through the use of our double buckle system. These double buckles combined with the high profile allows a big adjustment of where the power from the sail can be directed into the harness body.

- True 3D seat shaping.
- Elastic slalom belt.
- Cruising optimized outline profile.
- MPL Quad belt attachment.
- Patented Pin Release PLT bar System.
- cushioned quick release/half release leg straps
- Internal load plate
- Back support control system
- DuraCore webbing, tough and durable straps

BLACK / BLUE: 404.61120.020

CHARGER HARNESS

PROLIMIT | 2016

Slalom and Freerace harness. It is smallest profile seat harness for sailors who prefer maximum freedom of movement over high back support. It combines good support with solid spreader bar stability through the use of our double buckle system. This also allows the power from the sail to be directed higher or lower into the harness body, but keeps the mediumlow hook position favored by slalom sailors.

- True 3D seat shaping.
- Elastic slalom belt.
- Slalom optimized outline profile.
- MPL Quad belt attachment.
- Patented Pin Release PLT bar System.
- Cushioned quick release/half release leg straps
- Internal load plate
- Back support control system
- DuraCore webbing, tough and durable straps

GUNMETAL / BLACK: 404.61130.010

BLACK / BLUE: 404.61130.020

RACE HARNESS

Full on racing harness. It locks the power in with the double buckle spreader bar. It combines good support with comfort for long races. It is designed to let you put the power down for Formula racing and slalom.

- True 3D seat shaping.
- Elastic slalom belt.
- Race optimized outline profile.
- MPL Quad belt attachment.
- Patented Pin Release PLT bar System.
- Internal load plate
- Neoprene cushioned legstraps
- Back support control system
- DuraCore webbing, tough and durable straps

KITEBOARDING.

Prolimit was the first brand to make a KITE-SPECIFIC harnesses. We recognized that KITEBOARDING has different forces on a harness and we had to design KITE-SPECIFIC harnesses for real kite boarders

Since then we have adhered to these principles and continuously improve our designs to make the best KITEBOARDING HARNESS-ES on the planet. We do not add or remove a handle pass leash system to change a harness from a kite to a windsurf harness and vice-versa. These are our Unique features that distinguish the two applications.

• PULL DIRECTION RESISTANT. Our kite harnesses are built to withstand the forces of a kite pulling more vertically than horizontally during jumps and maneuvers. Prolimit kite harness were the first to be CAD designed around an anatomically 3D model. Because of this feature our harness allows perfect pressure distribution for more comfort and rock solid stability. No matter were the pull goes. Prolimit harness use pre curved and 3D shaped inner plates. By doing this we ensure our way of true 3D shaped harness! Our unique combo profile.

- KITE SPECIFIC BELT SYSTEM. A belt system which allows sliding of the harness slightly around the waist horizontally but keeps the harness in place for no vertical movement. The insert positions of the belts are optimized for the best combination of stretch and support.
- ASYMETRICAL BELT.

Our Kite boarding harnesses belts are ASYMETRICAL. This is done for two reasons.

- The overlap of the two belts is kept away from the maximum flush area, which stops it from washing open with a severe crash.
- This overlap is also kept way from the bar pad, where it would cause discomfort.
- MEMORY TABS. The Memory tabs are locking the front ends of the harness body onto the neoprene waist belt. Once set up for your tension preference, you can leave the MEMORY TAB set and only use the CLOSURE TAB to close the belt system.
- INTEGRATED SLIDE IN BAR PAD SYSTEM. UNIQUE in our industry, it
 combines with the harness body to give 360 degrees of padding encircling the body and protects the ribs and sternum
 from spreader bar pressure during the huge vertical pull experienced when doing extreme moves or body-dragging. It locks

the spreader bar in place making it impossible for the bar to ride up on its own. Our industry first innovation.

- HANDLE PASS LEASH. This is box-tacked in on both sides of the Harness. On our high end models we added Heavy- Duty stainless steel D-ring to accommodate the extreme forces while using it with either the rope-tube section, or attaching straight to the D-ring.
- PROLIMIT patented PIN RELEASE BAR. The patented PIN RELEASE BAR allows quick fitting on our KITEBOARDING HARNESSES. No threading of webbing is necessary and buckle setting stay the same. Just CLICK_AND_GO! Perfect and trouble free release in every condition and added safety.
- Kite specific: STUMP NOSE SPREADER BAR SYSTEM. The STUMP NOSE spreader bar combats unwanted unhooking from unusual pull directions like riding toe side.
- PROLIMIT FAT BAR. Used our high back Kite boarding harnesses.
 The over-sized PROLIMIT FAT BAR gives an even more twist resistance for free-style freaks, gives added safety and shows how strong a bar can be.
- PROLIMIT Duracore belt: to make our harness un destroyable
 we use a Duracore belt to attach our spreader bars. No simple
 polyprop (high wear) webbing but safetybelt quality. It is not
 something you would pick up. But if you use your harness you
 will notice that nothing can beats this durability.

THE ABOVE FEATURES MAKE OUR PROLIMIT KITE HARNESS A "UNIQUE PRODUCT" WHICH CAN NOT BE COMPARED TO ANY PRODUCT OUT THERE!

KITE WAIST PRO HARNESS

Top-end molded waist harness! Optimized molded support and higher back and side profile for more body contact. Double buckles and mulitple Dura Core straps are spreading the Fat bar load over a bigger part of the harness body.

PROLIMIT LEASH PRO KITE

GUARANTEED FIT!

WE CONTINUOUSLY RESEARCH THE LATEST BOARD SHAPED AND DIMENSIONS AND DESIGN OUR BOARDBAGS TO FIT THESE BOARDS. WE ALLOW FOR EXTRA WIDTH IN THE TAIL END TO ADAPT TO THE BOARD THICKNESS AND FOOTSTRAPS BUT ALSO EXTEND THE INSIDE OF THE BOARDBAG BY 5 CM FOR QUARANTEED FIT, THE SIZE OF THE BOARD, FITS THE BOARDBAG.

GUARANTEED FIT (sizing)

- Flat boardbags (Sport) we add 10 cm to the width and 5cm
- Side wall boardbags (Fusion) we add 5 cm to the width and 5 to the length

TECHNOLOGY

We pay special attention to all our technical products, of which boardbags are very important.

- Cool White fabric used on the bottom of Sport boardbags keeps the board cool in direct sunlight.
- Cool Silver used on Fusion boardbags reflects light and keeps
- the board extra cool in direct sunlight.

 Heavy duty webbing stitched around the edge of the bags protects against rail damage.
- Padded nose and tail reinforced.
- Heavy duty non corrosive zipper sliders.
- Easy grip zipper pullers, ideal grip for cold hands

BUSINESS CASE TRAVEL

The Prolimit business case travel is the bag for our business surfers!
The business case is expandable by enlarging the front compartment, if you need more space for roadtrips. The business case has a special sleeve to attach it to our flight case.

- Padded with Laptop Compartment.Separate Document Compartment.
- Expandable front Section.
- Integrated pocket/sleeve for flight case attachment.

BOOMS 2 0 1 6

MONOCOQUE CONSTRUCTION

Black Predator our freeride boom with wide profile, forged backen. It has our specific Boom profile and Monocoque Construction.

THE PREDATOR IS OUR FREERIDE SPECIFIC BOOM

Assault boom 140-200 Team wave 145-195 TCS BOOM 135-195

Pro boom 160-220 Assault boom 160-220 Team wave 160-210

Team C100 200-250

Black Predator Boom 180-240 Black Predator Boom 200-260

design of sails in this range.

Our bigger booms favour a more camber rearwards bend curve. The race oriented models combine this bend curve with wider back-ends to suit even the most radical deep camber race sails.

Material use has been fine tuned to give the best combo of stiffness, durability, feedback and price. From aluminium tube, aluminium V-grip to carbon, these combinations result in the right boom for the right application.

.

Our much copied front end still sets a standard for solid stability and easy of use. The no flex design will still be solid years down the line.

OUR PROLIMIT MONOCOQUE BOOMARMS ARE CAREFULLY BENDED TO GIVE THE BEST BENDCURVE FOR IT'S SIZE.

At Prolimit we take building booms seriously. Wave, Slalom, Freestyle, Freerace and Race sails all have different sail cambers and balance points along the boom. We have worked on using the right UIC boom bend curve for each size and discipline, allowing for overlap between disciplines either way.

Our smaller booms use a wave bend curve which favours an overhand grip for the front hand and suits the camber forwards

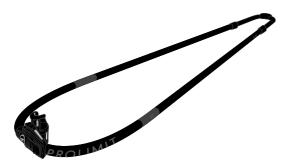

PRO BOOM

The Prolimit PRO boom is a high performance boom. It was developed for maximum strength and durabilty. We use the UIC size specific bend curve and monocoque construction. Featuring a 29mm Diameter with 1.5mm wall thickness made from T8 Easton Alloy. The Pro has 60cm adjustment for maximum sail range coverage. Available in 2 color combinations.

- 29mm Diameter with 1.5mm wall thickness.
- Made from T8 Easton Alloy, 2 Piece constructions.
- Continuous alloy front and back end to optimize stiffness.
- Single Lever Pin adjustment system for easy size adjustment. • 60cm adjustment for maximum sail range coverage.
- Axial boom head with integrated skinny adapter.

BLACK PREDATOR

The Prolimit Black Predator boom is our freeride boom. It has the wide profile forged backend. We use the UIC size specific bend curve and monocoque construction. Featuring a 29mm Diameter with 1.5mm wall thickness made from T8 Easton Alloy. The Predator has 60cm adjustment for maximum sail range coverage. Available in black only.

- 29mm Diameter with 1.5mm wall thickness.
- Made from T8 Easton Alloy, 2 Piece constructions.
- Continuous aluminum front and back end to optimize stiffness.
- Double Lever Pin adjustment system for easy size adjustment.
- Wide profile forged backend.
- Axial boom head with integrated skinny adapter.

TEAMWAVE

The Prolimit Team wave boom is our classic wave boom. Prolimit was the first brand who made a wave specific boom. The boom features a narrow diameter of 26mm in the grip area tapering to 29mm in the adjustment area. Featuring a 29mm Diameter with 1.8mm wall thickness made from T8 Easton Alloy. This construction make the Prolimit Team Wave boom the most durable alloy wave boom in the market as demonstrated over the last 15 years. The boom has 50cm adjustment for maximum sail range coverage

- Monocoque construction.
- Narrow diameter in the grip area of 26mm,
- Reduced Diameter Grip.
- manufactured from 1.8mm thick tube for maximize stiffness.
- Continuous aluminum front and back end.
- Double Lever Pin adjustment system.
- 50cm adjustment for maximum sail range coverage.
- Axial boom head with integrated skinny adapter.

COLOURS	CODE	SIZE
BLACK/ORANGE	407.61230.010	145-195 R2
Bluesteel/White	407.51230.020	160-200 R3

TCS RDG

The Prolimit TCS boom stands for "They call me skinny". This is a full length skinny boom with a continues alloy backend. Featuring a 26mm Diameter with 1.8mm wall thickness made from T8 Easton Alloy. The TCS has 50cm adjustment for maximum sail range coverage. The TCS uses the unique Prolimit 2 piece Axial boom head. The TCS boom is a performance driven wave boom.

- Specific Boom Profile constructed from continuous alloy tube.
- 26mm tubes, T8 alloy in 1.8mm thickness.
- Continuous aluminum front and back end.
- Double Pin adjustment.
- 50cm adjustment for maximum sail range coverage.
- Axial boom head with integrated skinny adapter.

ASSAULT V-GRIP

The Prolimit Assault boom is our V-grip boom. This extruded profile aluminium tube sets the standard for stiffness and comfort in smaller diameter booms. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. Featuring a 29mm Diameter with 1.5mm wall thickness made from T8 Easton Alloy. The TCS has 60cm adjustment for maximum sail range coverage. The Prolimit Assault boom means more power and less effort.

- 29mm, manufactured from T8, 1.5mm tube for maxim stiffness.
- Continuous aluminum front and back end.
- Ovalised tube, for more stiffness and easy sailing.
- Double Lever Pin adjustment system.
- 50cm adjustment for maximum sail range coverage.
- 2 Piece construction
- Axial boom head with integrated skinny adapter.

HYBRID RDG

The Prolimit Hybrid boom 150 is a hybrid of a stiff aluminium body with a carbon back end. Featuring a 26mm Diameter RDG body with 1.8mm wall thickness made from T8 Easton Allov and a carbon backend to optimize stiffness. Our high end wave/freeide boom!

- Specific Boom Profile constructed from continuous alloy tube.
- 26mm tubes, T8 alloy in 1.8mm thickness.
- Combined with a continuous carbon back end.
- Double Pin adjustment.
- 50cm adjustment for maximum sail range coverage.
- 2 Piece construction
- Axial boom head with integrated skinny adapter.

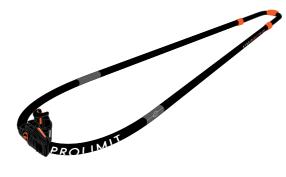

HYBRID

The Prolimit Hybrid boom 180 is a hybrid of a stiff aluminium body with a carbon back end. Featuring a 29mm Diameter with 1.8mm wall thickness made from T8 Easton Alloy and a carbon backend to optimize stiffness. Our high end freeride boom!

- Specific Boom Profile constructed from continuous alloy tube.
- 29 mm tubes, T8 alloy in 1.8mm thickness.
- Combined with a continuous carbon back end.
- Double Pin adjustment.
- 60 cm adjustment for maximum sail range coverage.
- 2 Piece construction
- Axial boom head with integrated skinny adapter.

BLACK/ORANGE 407.61240.000 180-240 R4	

HYBRID RACE

The Prolimit Hybrid race booms is 1 step below our famous C100 booms but will give you the ultimate racing experience. The Hybrid 2016 booms have a new race formula bend curve and wider carbon backend. This suits the deep backward draft of modern racing sails. Featuring a 29mm diameter with 1.5mm wall thickness made from T8 Easton Alloy and wide carbon back end to optimize stiffness. The Hybrid race is our high end free race/race boom!

- Specific Boom Profile constructed from continuous alloy tube.
- 29mm tubes, T8 alloy in 1.8mm thickness.
- Combined with a continuous carbon back end.
- Double Pin adjustment.
- 50 +60 cm adjustment for maximum sail range coverage.
- 2 Piece construction
- Axial boom head with integrated skinny adapter.

TEAM C100 CARBON RDG

The Prolimit Team Carbon C100 boom is our full carbon monocoque boom. The C100 140 is a full RDG 24,5 mm boom. Continuous carbon frontend and carbon backend gives you the stiffest boom construction. This is the boom for the pro's, wave or

• Specific Boom Profile curve.

PROLIMIT | 2016

- 24.5 mm reduced diameter grip for the complete boom.
- Continuous carbon front ends for maximum stiffness.
- Double Pin adjustment system.
- Axial boom head with integrated skinny adapter.

C100 V-GRIP CARBON

The Prolimit Team Carbon C100 V-grip windsurf boom is the carbon version of our Assault boom. It is a Carbon V-Grip boom. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. The V-grip carbon uses full carbon monocoque tubes together with a full carbon back end for maximum stiffness.

The C100 V-grip 150 has a diameter of 28.5 mm. The Prolimit C100 V-grip boom gives you more power and no flex with less effort.

- Specific Boom Profile curve.
- 29mm reduced diameter grip for the complete boom.
- Continuous carbon front ends for maximum stiffness.
- Double Pin adjustment system.
- Axial boom head with integrated skinny adapter.

C100 V-GRIP CARBON

The Prolimit Team Carbon C100 V-grip windsurf boom is the carbon version of our Assault boom. It is a Carbon V-Grip boom. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. The V-grip carbon uses full carbon monocoque tubes together with a full carbon back end for maximum stiffness.

The C100 V-grip 180 has a diameter of 36 mm. It uses a Race/ Formula bend curve with a wide tail end. The Prolimit C100 V-arip boom gives you more power and no flex with less effort.

- Specific Boom Profile curve.
- 36mm diameter grip for the complete boom.
- Continuous carbon front ends for maximum stiffness.
- Double Pin adjustment system.
- Axial boom head with integrated skinny adapter.
