www.prolimit.com

Prolimit products are designed and developed in South Africa and the USA. Our Products are tested worldwide and distributed on all continents.

.PROLIMIT BRAND STORY.

PROLIMIT. FOUNDED IN 1980. QUALITY, PERFORMANCE AND DOING THINGS BEST SITS IN OUR DNA.

Prolimit has the desire to create products that perform. Designers, teamriders and sales team working to make relevant products for our market. After 35 years in this field, we do it right.

Prolimit was founded in the Netherlands. From there we are represented in every single country in the world. Prolimit created champions in windsurfing and kiteboarding and many of the best athletes in the world have found a fertile ground when it comes to working with the best product available. Looking back we are proud that so many young careers started with our products. Our product engineering is being led by our head-office in the Netherlands in close cooperation with our R&D and design office in Cape Town, South Africa. Talented designers joined our team and in the challenging conditions of the South African coastline we could spend even more time on the water in all seasons while keeping the

unique northern testing grounds in the Netherlands as well for sub zero conditions. We collaborate with experts from the USA and Taiwan for product technology, this technology is used in our products and have created long lasting and durable relationships with the best factories in the world.

THE ONLY WETSUIT WITH TRUE SHAPE AND TECHNOLOGY

- SINCE 1980 -

3D DESIGNED

A synthetic rubber foam laminated with a lining made out of fabric. Stretch is determined by the amount of air in the neoprene and the stretch of the laminated lining. The lining has more stretch in a certain direction. The rubber can be made from oil or limestone extracts in a furnace. Limestone based rubber chips are made at 1/10th of the temperature that is needed to make the rubber chips from petrochemicals. The carbon footprint is much smaller (20%) because of this lower temperature process. Prolimit uses this limestone neoprene in all of our neoprene products. There are performance advantages too:

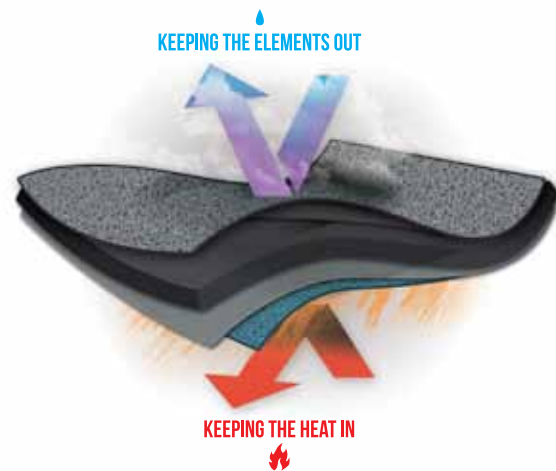

Limestone neoprene has a higher micro-cell count. The separate closed cells or bubbles within the neoprene are smaller and closer together. Typical oil-based neoprene has 60-70% cells per volume, whereas limestone neoprene has a 94% cells per volume. So, limestone neoprene has more air inside the rubber than oil-based neoprene. That means better stretch, better thermal protection and lighter weight.

EXACT FIT AND OPTIMUM INSULATION

Our tailored fit uses precise seam placements for an exact fit. We do not rely on the stretch of the neoprene for a good fit. This removes material strain and takes tension off the seams. Most wetsuits use fewer seams. This requires the neoprene to stretch to adapt to your body which minimizes the insulation and stresses the seams causing leaks in a short time.

Prolimit uses different neoprene thicknesses and linings in specific areas for different stretch, different wear, insulation and different price segments.

“MANY PEOPLE LOOK AT A WETSUIT FROM A MARKETING STANDPOINT AND JUDGE ON ITS COLOR AND PRINTS. THERE IS MORE TO IT.”

NATURE PRENE

Prolimit is one of the first brands to use Nature Prene for some of our models in production.

Nature Prene is made from natural rubber harvested from rubber trees and is 100% eco friendly. The lining lamination is done with solvent-free, water-based glue to keep it environmentally friendly. Aqua Alpha glue is used to glue the panels together in production and is a 100% eco friendly glue.

NATURE PRENE
100% ECO FRIENDLY GLUE

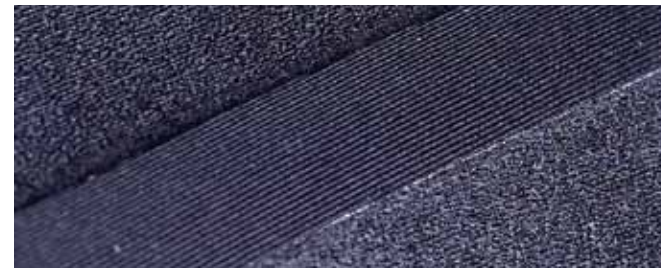

PROLIMIT TECHNOLOGY

PROLIMIT IS USING DIFFERENT SEAM TECHNOLOGIES TO REACH THE REQUIREMENTS LAID DOWN FROM THE DESIGN TEAM AND OUR CUSTOMERS.
www.prolimit.com

NEO TAPE

New Neoprene tape is a lasercut tape which bonds naturally to the neoprene giving a straight, strong and durable seam that stretches as much as the base material.

POWERSEAM (patented technology)

A unique technology! Colored thin, slick looking seams are triple glued and sealed off on one or both sides with a liquid rubber seal. The liquid seal reinforces the seams and prevents any water leakage. Our Stitchless wetsuit construction. The advantage: Thin, colored, high wear resistant, watertight, super stretch seams and the ability to use it on skin surfaces. It also enables us to use this on skin neoprene.

FTM SEAM

FTM our Fluid Taping Method. Triple glued seams with the outside of the seam sealed off by a wider black carbon neoprene seal. The inside of the seam is protected by our glued and blind stitched technology. FTM seams are durable, watertight and high stretch.

FUSED NEOPRENE EDGES

Heat pressed neoprene edge for increased comfort and durability with no fraying.

GLUED AND BLINDSTITCHED SEAMS

Triple glued panels are stitched together with a special stitching method. Partially puncturing the neoprene to keep the water tightness of the seam wetsuit. Each thread is protected by a tape at the end. Our perfect finish makes our glued and blind stitched wetsuit indestructible!

FLATLOCKED SEAMS

Flatlock seams are used on summer suits and rashguards. The seam has an open, flat stitch joining overlapped neoprene panels. This is the strongest seam used in wetsuits.

NORDIC DRYSUIT SERIES

HOODED

The 4-layer waterproof breathable fabric combines a hydrophobic outer for waterproofing and hydrophilic inner membrane for keeping moisture away from the body.

A full seal waterproof zip with easier opening/closing slide.

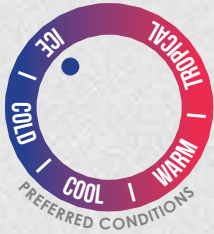

Sealed materials, Neoprene collar seal and wrist seals, Latex ankle seals

PCT

PROLIMIT COMPRESSION TECHNOLOGY

The Prolimit Compression wear is designed as athletic support clothing for watersports. The PU compression zones are ergonomically designed and heat welded onto a flexible neoprene base structure to give ligament support and increases blood and lymphatic flow. This improves performance and sports recovery times.

SUP TOP CONVERTIBLE 1.5MM FL

The Prolimt SUP Top Convertible 1.5mm is the most versatile top for your paddle sessions. It can be used as a zipped up top with front wind block for colder air, and can then be unzipped for a loose fit and front ventilation as you warm up. While unzipped, it supplies cross-ventilation from the front to the back mesh panels. Made from our PO2 fabric; Prolimit's quick dry non absorbing fabric. The panels under the arms are made of a thinner version of the PO2 fabric for more movement and breathability.

- PO2 fabric
- Flatlock construction
- Front ventilation panel for maximum breathability
- Features two zipper positions for heat regulation
- YKK zipper

SUP TOP CONVERTIBLE WOMEN

Stop overheating with the Prolimt SUP convertible top. A breathable mesh panel behind the zip makes it possible to start your session with the zip closed to keep warm and as soon as you warm up the zip can be opened to supply cross-ventilation from the front to the back mesh panels. The mesh panel keeps the top compact and stops the unzipped top from flapping around while paddling. The most versatile SUP-wear essential. Plush lined quick dry fabric in chest panels combined with vented breathable panels in armpit, side and parts of the back.

- Two zip positions for heat regulation
- Vented airflow panels
- Quick dry & Breathable
- Plush lined chest
- Flatlock seams
- YKK zip

BOOTS & SHOES

PROLIMIT CREATED THE OCL LAST TECHNOLOGY, (ORTHOPEDIC CONTROLLED LAST).

THE ADVANTAGE: BETTER FITTING FOOTWEAR THAN ANYTHING AVAILABLE ON THE MARKET!

History: By adding in more seam shape in our boots& shoes we found out that it did not gave us better fit. The reason; we were using the same last as all our competitors! The Alloy casted lasts determines the shape and fit of neoprene footwear. A neoprene sock is mounted around the last and rubber parts are joined together. The last goes into the oven for the rubber parts to cure, moulding all exactly around the last.

Solution: Realizing this we started the search for a better last. We found out that there are no lasts made for active water sports . All lasts available in the market are made for multi purpose usage; like for waders boots or fishing purposes which are static shaped profiles.

That made us to decide to build the best last possible for active water sports. Together with a Orthopedic specialist we analyzed different feet and came up with complete new last designs. In the design we incorporated the stretch of the materials, water influence and the dynamic positions of the feet during active water sport. Your feet are made of 26 bones and 214 ligaments! They need proper support! Also during active water sports.

OCL LASTS IS DIFFERENT!

Most of the Prolimit boots and shoes are built using our unique, Prolimit owned, OCL (Orthopedic Controlled Last). Nobody in the entire industry made the same effort to go this far! We created the best SHAPE and TECHNOLOGY in a neoprene boot or shoe.

PROFILED HEEL

- Shaft is more raked back for the Dynamic position,
- The heel of our OCL lasts are much narrower closing nicely around your Achilles tendon and supporting it,

SWEPT FOOT PROFILE

- Our arch is lower to prevent rolling of the boot around your foot,
- Our sole foot arch is pre shaped to fit the natural position of the foot which is not flat

More important, OCL last build boots and shoes will have less water entry. You can hear the difference when filled up with water, while other boots suck in water. Neoprene is stretching in the water even more, all boots and shoes of other brands are sucking in water as boots and shoes are not fitting tightly enough around your foot. Prolimit OCL last build boots are making no noise at all. WHY? Simple, OCL last build boots are leaving no air space in the boot which can not be filled up by water! Shape and Technology! More function and better performance!

While all other brands in the market are using lasts made from fishing boots Prolimit took the effort to create something which is noticeable when using. We challenge you, do the test yourself!

PREDATOR BOOT FTM 5.5 ARMoured

The Prolimit Predator armoured boot 5.5mm is a high performance boot that protects your feet from sharp objects due to our extremely strong Armoured Aramid sole. Built on our signature OCL last for better fit and performance.

- Armoured Aramid sole
- Airflex 500+ neoprene closure cuff
- Footlock arch control

- GBS (Glued and Blind-Stitched)

INNER SYSTEMS & RASHGUARDS

INNERSYSTEMS

Neoprene wetsuits have remained unchanged since its original concept. This concept being a thin layer of water insulated between your body and the wetsuit. Body temperature is transferred into this water and insulated from surrounding weather conditions. Seals on cuffs, collar and zipper ensure that an excess of water does not enter the wetsuit.

WIND-CHILL

The human body loses heat largely through conduction and convection. The rate of heat loss depends on the wind speed over the surface, the faster the wind speed, the more readily the surface cools. By using a 1st layer (innersystem garment), water will remain against your skin and resist excess water entering. Added thickness and insulation contributes to extra warmth and wind-chill will have a minimal cooling effect. Comfort and manoeuvrability will also increase as the wetsuit and innersystem garment slide frictionless over each other.

PROLIMIT INNERSYSTEMS are made out of thin Limestone based neoprene. A high heat reflective Titanium layer optimizes heat retention.

DESIGN

- Ergonomic fit and stretch for ease of movement.
- Engineered body shaping follows the body curves to retain body heat.
- A variety of materials are used, specifically utilized in different parts of the garment.

WINDSURF HARNESES

HARNESS TECH

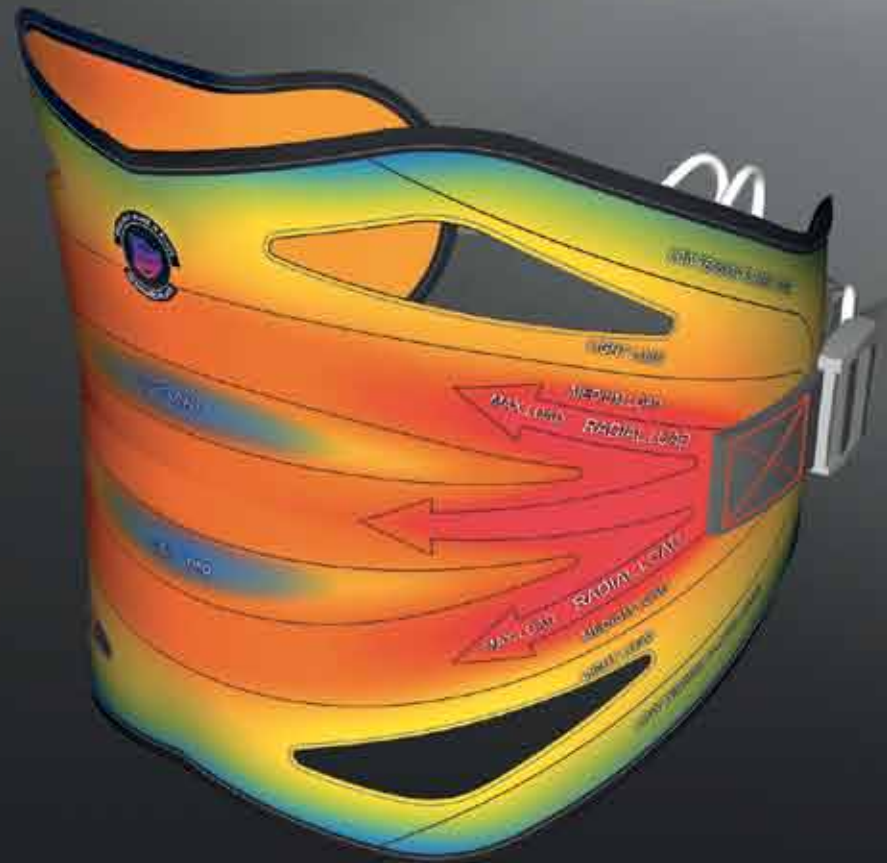

DEDICATED WINDSURF PRODUCTS

25 Years of evolution has focused our harness designs. We have relevant products that work seamlessly harnessing wind power and supporting and protecting the user.

- Prolimit harnesses are CAD designed around an anatomically correct 3D model.
- Pre-curved and 3D shaped structure and padding fits the rider's body without bunching or pressure points.
- 3D shaped pillow for the lumbar area has the correct shaped through 2 Axis.
- Structural flex zones allows the hard plates to flex with the riders body for active support.
- Stretchy Neoprene waist belt system molds to the body contours for maximum grip. No riding up.
- Easy Belt waist belt is used on models where sliding is needed and low water absorption is important.
- 4-Point connecting points between the neoprene belt and the harness body for improved stability.
- Neoprene soft-edge runs full width to cushion the body from edge tension and stop chafe.

- Use specific belt and buckle systems are used. Quad belt system supports the spreader bar on high load harnesses. Duo-belt system supports the spreader bar in low side profile harnesses ideal for freedom of movement.
- PROLIMIT patented PIN RELEASE BAR system, "CLICK AND GO" is used on all our harnesses for quick fitting.
- P twist-free hook design.
- Use-specific outlines are used Wave, Freeride, Freestyle or Race. More area for high load or lower sides for more freedom. Higher backs for more load spread.

Iconic high-flex harness. The molded Type-T waist harness is a favorite of many including our team! It's a comfortable and flexible waist harness with tons of support. The neoprene softedge bridges the gap between a low side profile structure and high side profile support outline. This makes it perfect for long sessions and high contortions.

- Pre-curved and 3D shaped
- 4 Point connected neoprene high grip belt
- Molded outside construction
- Combo outline profile
- Patented pin-release PLT bar system
- Dual density support pillow

CRUISER

BLACK / BLUE: 404.71110.010

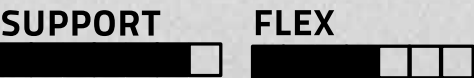

A cruising and freerace harness with high back support and a split sidewall. High support harnesses can restrict leg movement during waterstarts and high bend body positions. We have added a split sidewall to free up the legs on this model.. High back support with solid spreader bar stability through the use of wide webbing straps that take the load from the sail into the harness body.

- Split sidewall construction
- True 3D seat shaping
- Molded outside construction
- Elastic closure belt
- Cruising optimized outline profile
- Wide belt bar attachment
- Patented pin-release PLT bar system
- Cushioned quick release/half release leg straps
- Internal load plate
- Back support control system

- Comfort optimized, high outline profile
- Patented pin-release PLT bar system
- Cushioned quick release leg straps
- Internal load plate

KITESURF HARNESES

HARNESS TECH

DEDICATED KITESURF PRODUCTS

17 Years of evolution has focused our harness designs. We have relevant products that work seamlessly harnessing wind power and supporting and protecting the user.

- Prolimit harnesses are CAD designed around an anatomically correct 3D model.
- Pre-curved and 3D shaped structure and padding fits the rider's body without bunching or pressure points.

- 3D shaped pillow for the lumbar area has the correct shaped through 2 Axis.
- Structural flex zones allows the hard plates to flex with the riders body for active support.
- Stretchy Neoprene waist belt system molds to the body contours for maximum grip. No riding up.
- Easy Belt waist belt is used on models where sliding is needed and low water absorption is important.
- 4-Point connecting points between the neoprene belt and the harness body for improved stability.

- Neoprene soft-edge runs full width to cushion the body from edge tension and stop chafe.
- Use specific belt and buckle systems are used. Quad belt system supports the spreader bar on high load harnesses. Duo-belt system supports the spreader bar in low side profile harnesses ideal for freedom of movement.
- Multiple handle pass leash attachment points are fitted to kiteboarding harnesses. Use the one that suits you.
- PROLIMIT patented PIN RELEASE BAR system, "CLICK AND GO" is used on all our harnesses for quick fitting.

- Use-specific outlines are used Wave, Freeride, Freestyle or Race. More area for high load or lower sides for more freedom. Higher backs for more load spread.
- Slide in Bar pad system ties the barpad into the harness body as one wrap-around padding. Full molded EVA padding with integrated key/kiteknife pocket.
- Added designs feature sliding technology for wave harnesses and non absorbent EVA bodies.

Sliding wave harness Technology. A new concept in wave riding harnesses. This rotating and sliding harness is designed to create more freedom of movement and the possibility to rotate further into your turns like you are surfing. The harness slides around your body when you do a bottom turn or if you hit the lip. This results in more powerful turns, easier riding and more control on the wave.

- Sliding technology, smooth inside

SUPPORT  **FLEX** 

Girls kite seat harness for racing and free-ride. It has a Medium profile for stability. It has solid spreader bar stability through the use of our double buckle system. These double buckles allow a big adjustment of where the power from the kite can be directed into the harness body.

High back seat harness. Maximum support kiteseat harness for racing, slalom and foilboarding. It has extra high back support to allow high kite power transfer and comfort for extended racing or freeride sessions. It is newly developed to give all the features of our seat harness range with added back support over a large area for comfort and anatomic support.

KITSEAT PRO

404.51340.000

A high modulus seat harness for high power applications. It has a Medium profile with molded upper half that carries the kite load. It has solid spreader bar stability through the use of our double buckle system. These double buckles combined with the molded back support allows a big adjustment of where the power from the kite can be directed into the harness body.

- True 3D seat shaping
- Elastic closure belt

BOARDBAG

BOARDBAG TECH

We pay special attention to all our technical products, boardbags are a very important part of these technical products. For every sport we want to make the perfect bag. Windsurf-, Kite-, SUP- and Wakeboardbags include our line-up. All designed by people who face the common day problems of our end-consumers.

GUARANTEED FIT!

We continuously research the latest board shapes and dimensions and design our boardbags to fit these boards. We allow for extra width in the tail-end to adapt to the board thickness and footstraps but also extend to inside of the boardbag by 5 cm for a perfect fit. The size of the board, fits the boardbag.

- Flat boardbags (Sport) - we add 10cm to the width and 5cm to the length
- Side wall boardbags (Fusion) - we add 5cm to the width and 5 cm to the length

TECHNOLOGY

We use different materials and simple solutions to everyday problems so we can assure our bags protect your gear in the best way possible.

- Cool white fabric used on the bottom of Sports boardbags keep the board cool in direct sunlight
- Cool silver used on the Fusion boardbags reflects light and the board extra cool in direct sunlight

- Heavy duty webbing stitched around the edge of the bags protects against rail damage
- Padded nose and tail reinforcements
- Heavy duty non corrosive zipper sliders
- Easy grip zipper pullers, ideal grip with cold hands

KITESURF BB SPORT TWIN TIP

- 5mm foam padded bag
- Outlines shapes to fit most current twin-tip boards
- XL sizes fit most light wind twin tips

BOOMS & GRIPS

BOOM TECHNOLOGY

At Prolimit we take building booms seriously. Wave, Slalom, Free-style, Freerace and Race sails all have different sail cambers and balance points along the boom. We have worked on using the right UIC boom bend curve for each size and discipline, allowing for overlap between disciplines either way.

Our smaller booms use a wave bend curve which favours an overhand grip for the front hand and suits the camber forwards design of sails in this range.

Our bigger booms favour a more camber rearwards bend curve. The race oriented models combine this bend curve with wider back-ends to suit even the most radical deep camber race sails.

MATERIAL ENGINEERING

Material use has been fine tuned to give the best combo of stiffness, durability, feedback and price. From aluminium tube, aluminium V-grip to carbon, these combinations result in the right boom for the right application.

FRONT END

Our much copied front end still sets a standard for solid stability and easy of use. The no flex design will still be solid years down the line.

PRO BOOM

High performance boom: developed for maximum strength and functionality. Specific boom profile and monocoque construction

- 29mm Diameter with 1.5mm wall thickness
- Made from T8 Easton Alloy, 2 piece construction
- Continious alloy front and back end to optimize stiffness.
- Double pin adjustment sytem for easy adjustment
- 60cm adjustment for maximum sail range coverage
- Axial boom head with intergrated skinny adapter

COLOURS	CODE

SIZES
140-200, 160-220, 180-240, 200-260

PREDATOR

Our freeride boom with a wide profile forged backend. It has our specific boom Profile and monocoque construction. The predator is our freeride specific boom in black only.

- 29mm Diameter with 1.5mm wall thickness
- Made from T8 Easton Alloy, 2 piece construction
- Continious alloy front and back end to optimize stiffness.
- Double pin adjustment sytem for easy adjustment
- Wide light weight 60cm tailend with pulleys
- Axial boom head with intergrated skinny adapter

SIZES
160-220, 180-240, 200-260

TEAM WAVE

Team wave has an narrow diameter in the grip area, 26mm. Our reduced diamter boom grip. Including our new RDM cup Axial boom head on the 145

- Monocoque construction
- Narrow diameter in the grip area of 26mm (RDG)
- Manufactured from 1.8mm thick tube, for maximum stiffness
- Continuous front and back end.
- Double lever pin adjustment system
- 50cm adjustment for maximum sail coverage
- 2 piece construction
- Axial boom head with integrated skinny adapter (160) and RDM boomhead on 145

TCS RDG

They Call me Skinny. Our TCS is a full 26mm diameter boom wit a continuous alloy backend. It's a performance driven wave boom. Alloy continuous front and back end. 2 piece Axial boom. Including our new RDM cup Axial boom head on both sizes. This is the ideal wave boom.

- Specific boom profile constructed from a continuous alloy tube.
- 26mm diameter tube, T8 alloy, 1.8mm wall thickness
- Continuous aluminum front and back end.
- Double pin adjustment
- 60cm adjustment for maximum sail coverage
- Axial boom head with intergrated skinny adapter

COLOURS	CODE
 Black/White/Orange	407.71260.010

SIZES
135-195, 150-210

ASSAULT

The Prolimit Assault boom is our V-grip boom. This extruded profile aluminium tube sets the standard for stiffness and comfort in smaller diameter booms. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. Featuring a 29mm Diameter with 1.5mm wall thickness made from T8 Easton Alloy. The Assault has 60cm adjustment for maximum sail range coverage. The Prolimit Assault boom means more power and less effort.

- 29mm, manufactured from T8 alloy with 1.5mm wall thickness for maximum stiffness.
- Continuous aluminum front and back end
- Ovalised tube, for more stiffness and wasy sailing
- Double pin lever adjustment
- 50cm adjustment dir maximum sail range coverage
- 2 piece construction
- Axial boom head with intergrated skinny adapter

HYBRID

The Prolimit Hybrid boom is a hybrid of a stiff aluminium body with a carbon back end. Featuring a 29mm Diameter tube with 1.8mm wall thickness made from T8 Easton Alloy and a carbon backend to optimize stiffness. Our high end freeride boom.

- Specific boom profile constructed from a continuous alloy tube
- 29mm tubes, T8 alloy in 1.8mm wall thickness
- Carbon back-end for maximum stiffness
- Double pin adjustment
- 50cm adjustment for maximum sail coverage
- 2 piece construction
- Axial boom head with intergrated skinny adapter

TEAM C100 CARBON

The Prolimit Team Carbon C100 boom is our full carbon monocoque boom. The C100 140 is a full RDG 24,5mm boom, other sizes are 26mm. Continuous carbon frontend and carbon backend gives you the stiffest boom construction available. This is the boom for the pro's, wave or slalom!

- Specific Boom Profile curve
- 24.5mm reduced diameter grip area for the 140
- 26mm reduced grip area for the other sizes
- Double pin adjustment
- Axial boom head with integrated skinny adapter

COLOURS	CODE
 Black/Grey/Orange	407.71250.000

140-200, 180-240, 200-260

V-GRIP C100

The Prolimit V-Grip C100 windsurf boom is the carbon version of our Assault boom. It is a Carbon V-Grip boom. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. The V-grip carbon uses full carbon monocoque tubes together with a full carbon back end for maximum stiffness. The C100 V-grip 180 has a diameter of 26 mm. The Prolimit C100 V-grip boom gives you more power and no flex with less effort.

- Specific Boom Profile curve
- 26mm diameter grip for the complete boom
- Continuous carbon front and back end
- Double Pin Adjustment system
- Axial boom head with integrated skinny adapter
