BEHIND TABOU

PHILOSOPHY: #beinspired

We have a simple philosophy: build boards to inspire the world's windsurfers. To do this, we design and test new prototypes all the time, but we only make changes to the production line when we know that the new boards are not just different but also better.

We like to think in 2 year cycles. Every shape is tried and tested for at least 2 years before being released to the public. The testing process starts with Fabien shaping and surfing a new prototype, and he then passes the board to Cedric and the team for testing. Nothing goes into production until the team is completely happy.

The lessons learned from each board help make every other board better. Even though a slalom board like the Manta is very different from a wave board like the DaCurve, the basic principles of fluid dynamics are always the same. The knowledge we learn from making a Manta fast can be used to make the wave boards faster. Fabien's 26 years of experience help him to know which qualities can be transferred from one board to another. With every new prototype, we learn more about how to make windsurfing boards better.

For 2018, we introduce two new boards to the Tabou range: the 3S Classic and the DaBomb. Both boards combine modern features with traditional outlines. Over the last decade boards have become shorter and shorter. We like compact shapes, but we also understand the comfort and familiarity of a longer board. The past can inspire the future. We revisited the comfortable classics and added modern refinements learned through our R&D, like a cut-off tail for an increase in maneuverability without any compromise to comfort.

We are a passionate group of windsurfers making boards to inspire the future of windsurfing. The development never stops, our passion for windsurfing never dies and the result are boards that are not just better but different.

TABOU WHAT`S NEW

DA BOMB

84 | 94 | 104

A brand new Tabou shape for 2018: the DaBomb is our fastest wave board with an amazing windrange. We incorporated concepts we learned while developing the Pocket, like a cut-off tail and mini-channels, into longer outline. With the option to ride as a single fin, the DaBomb is the best option for mushy waves and bump-n-jump seas.

POCKET

77 | 87 | 97

Brand NEW channels in the tail make the Pocket earlier to get planing, faster going from rail to rail, and easier to turn.

3 STYLE

LTD / CED

86 | 96 | 106 | 116

We partnered with MFC in order to provide every new 3S with an MFC-engineered Freewave single fin. The MFC Freewave fin offer more control and more maneuverability. The new 3S also comes with redesigned deck pads to provide better support under the feet, creating a more comfortable ride.

3 STYLE

CLASSIC

97 | 107 | 117

The 3S Classic is a re-worked version of the classic 3S shape. We added refined features from the new 3S without losing the legendary easy access of the classic 3S. A longer, more balanced outline makes the 3S Classic a perfect all-around board for windsurfers who like traditional shape. The 3S Classic is the plug and play board ready to work for any condition and any kind of sail.

TWISTER

90 | 100

Short, fast, and ready to spin! At 209cm long, the new Twister is compact and developed to compete at the highest level of modern freestyle.

MANTA

66 | 81

Our professional slalom series, the 2018 Manta 81 and the 66 have been updated to match the already refined 85 and 71. And now the 85 and 81 come with a foil-ready tuttle box.

SPEEDSTER

79 | 85

The Speedster has long been a racing powerhouse. For 2018 the Speedster now comes equipt with a high quality Foil-Ready fin box so you can get even more water time this summer.

ROCKET

LTD / CED

125 | 135

At the time of writing, we are testing prototypes for the new Rocket 125 and 135. The new shape will be announced when ready.

ROCKET WIDE

LTD / CED

100 | 110 | 120 | 135

After seasons of testing the Rocket Wide has remained a favourite for enthusiastic freeriders and freeracers everywhere. In 2018 the board has seen further upgrades with the addition of a special Foil Version (ROCKET WIDE 120 and 135) making the Rocket Wide one of the most versatile boards in the Tabou Range.

WAVE BOARDS

WAVE BOARDS

We have three dedicated wave boards: the DaCurve, the Pocket, and the DaBomb. The DaCurve works best with strong waves OR strong winds. This is the board that our professionals use on the world tour. The Pocket is faster, wider, and shorter than the DaCurve, making it perfect for progressive riding in waves up to mast-high in both onshore and sideshore winds. The DaBomb is our fastest wave board. Perfect for mushy waves or spots with a strong current, the DaBomb gets going quickly and can be used as a single fin. This makes the DaBomb our only wave board that we recommend for bump'n'jump riding too.

WAVE DA CURVE

CONSTRUCTION

WAVE FLEXLIGHT CARBON / INNEGRA SANDWICH

DA CURVE

A hardcore wave board, the DaCurve is fast enough for onshore and radical enough for Hookipa.

For Who:

Wave riders looking for 100% wave performance

What board works at both Pozo and Jaws? The DaCurve. A balance of speed and radical turning, this is the board that Thomas Traversa used to win the PWA World Title. The winger outline carries speed through turns and the full rails make takas easier. The DaCurve is a down-the-line wave board that is fast enough to use in strong onshore winds. New pad design for 2018 reduces drag to get planing faster.

WAVE POCKET

CONSTRUCTION

WAVE FLEXLIGHT CARBON / INNEGRA SANDWICH

POCKET

Compact, fast, easy to turn and great for wave tricks, the Pocket offer progressive newschoolwaveriding in waves up to mast-high and in side-shore to onshore winds.

For Who:

New-School wave riders

The Pocket is short and fast for riders looking for radical real-world wave riding. The straight rocker guarantees a fast ride no matter if the current is strong and the wind is gusty. When pressure is applied to the backfoot during wave riding, the Pocket turns radically tight and the wide tail carries speed through turns even in windswell and onshore winds. The compact outline makes it easy to spin new school moves like takas and shakas. We originally designed the Pocket for our home breaks in Europe, but our team quickly found the board to be just as fun in the radical waves of Hawaii. New for 2018, channels in the tail make the Pocket faster, earlier to get planing and easier to carve.

DA BOMB

The fastest Tabou wave board, designed for waves that require early planing and lots of speed.

For Who:

Waverider focused on speed and early planing

New for 2018, the DaBomb is a waveboard that is fast and easy. The rocker is designed for speed. The longer outline gives the DaBomb a balanced feel and allows you to easily get out through whitewater. The short tail means that the board turns fast and easily when pressure is applied to the back foot. The mini-channels on the bottom give more control in the bottom and top turns. The center fin box uses the US-box system to allow for either a thruster setup or a big single fins to get planing early and ride through chop. The combination of speed and control make the DaBomb the best jumping board in the Tabou range.

FREEWAVE BOARDS

FREEWAVE BOARDS

Freewave is a category of boards for the windsurfer who wants one board to do everything: fly around on flatwater, play in the waves, and maybe try the occasional freestyle move, like carving 360s. The 3S is our compact freewave designed for the new-school experience of tight turns and easy maneuverability. The 3S Classic is longer and more traditional with a focus on being forgiving and easy to balance.

3STYLE

CLASSIC

FREEWAVE 3 STYLE

CONSTRUCTION
PVC FULL SANDWICH CK
PVC FULL SANDWICH HD

3 STYLE

A compact freewave board for new-school windsurfers who want to have one board for freeriding, wave sailing, freestyling, and bump-n-jumping.

For Who:

Windsurfer looking for a compact all-around board

A full quiver in just one board, the 3S is a board to ride in all sea conditions, similar to the all-mountain ski in skiing. The 3S planes fast and easily like a freerider but is maneuverable enough to carve in the waves and to try freestyle tricks.

In 2017, we introduced the new compact 3S. The shorter outline makes turning much easier and therefore allowed us to use a straighter rocker, which makes a faster board.

The shorter shape also fits better in small cars and boardbags.

The 3S uses a double step tail cutout to increase both speed and maneuverability. In a straight line, the cutouts have less wetted surface area and therefore less drag and a higher top speed. On the rail, the cutouts act like kick tail so that the board turns in a much tighter radius.

PVC FULL SANDWICH HD

3 STYLE CLASSIC

A traditional, longer freewave outline with modern features makes the 3S Classic an easy to-ride board for freeride and bump'n'jump.

For Who:

Windsurfers looking for a traditional all-around board

New for 2018, we introduce a classic: the traditional 3S that we worked on for a decade combined with select features from the compact 3S introduced in 2017. The 3S is Tabou's most successful shape: easy to use and fun for all conditions. We took a traditional, longer outline and a forgiving, early-planing rocker and added select modern features, like a cutoff tail for easier jibing.

Like the 3S, the 3S Classic uses a double step tail cutout to increase both speed and maneuverability. In a straight line, the cutouts have less wetted surface area and therefore less drag and a higher top speed. On the rail, the cutouts act like kick tail so that the board turns in a much tighter radius.

The length of the 3S Classic allows it to go fast while being easy to balance and cutting through chop.

TRADITIONAL, LONGER OUTLINE FOR EASY COMFORT

FAST, EVEN IN CHOPPY WATER

CUT TAIL FOR MANEUVERABILITY

HOW TO CHOOSE:

How do you choose between the 3S and the 3S Classic? If you are looking for your first short board, the longer outline of the 3S Classic is better for you. Likewise, you should also go with the 3S Classic if you prefer a board that is more forgiving rather than maneuverable. If you are already comfortable on a short board and want a board to help improve your wave sailing or freestyle while still being fun on flatwater, the more compact 3S is a better shape for you.

FREESTYLE BOARDS

FREESTYLE

After starting as a bit of fun on flat water so many years ago freestyle has evolved into one of the most dynamic aspects of windsurfing. Whether you're just starting out or looking at adding the latest moves to your list, the Tabou Twister is bred by freestylers for freestylers with the ultimate combination of Speed, Pop and Control.

TWISTER

FREESTYLE TWISTER

CONSTRUCTION
CARBON BIAX SANDWICH

TWISTER

The Twister is a compact, hardcore freestyle board designed to push the limits of modern freestyle.

For Who:

Professional Freestylers

New for 2018, we completely revolutionized the Twister 90 and 100. The shorter the board, the faster it spins. Fabien cut the nose and tail off the Twister, and Anthony was able to pull radical tricks in the testing. They worked together to create a board that spins faster but does not lose acceleration or control. The new 90 and 100 shapes are both 209cm long for a spinning blitz.

The Twister's speed comes from a low-entry rocker that is flat near the tail. The winger outline gives the board more pop because the board is wide in the middle but has a small tail that when pushed on, creates a wave under the board that acts like a small ramp. The deep V bottom shape and boxy rails make the Twister forgiving during spinning tricks.

The Twister is designed to push the limits of modern freestyle.

SLALOM/RACE BOARDS

SLALOM / RACE

We created two slalom boards: The Speedster and the Manta. The Manta is our 100% professional slalom board designed. The Speedster is a little more comfortable, a little less radical but still with a high top speed, perfect for national and regional races. Choosing between the two? The Manta is for riders who race professionally, and the Speedster is for anyone who likes to race on the weekends or to set local GPS speed records. There is a Tabou board for every rider: waves vs flatwater, modern vs traditional.

MANTA

Every Tabou professional racer rides the Manta, our hardcore race board.

For Who:

Professional Slalom racers

The Manta is a no-compromise racing board built for our team of pro riders to beat their competitors. Whether light winds in Korea or 40knts in Fuerteventura, our team needs an outline, rocker and cut-outs that are optimized for the PWA slalom course. For 2018, Ross Williams and Cedric Bordes worked with Fabien to increase both wind range and performance of the 66 and 81. The Manta 81 and 85 are now included with a foil ready tulle box.

SPEEDSTER

The Speedster is slalom speed without any difficulty.

For Who:

RACERS and FREERACERS who want to win without worrying about tuning.

The Speedster blurs the line between race winning speed and easy jibing. We took what makes the Manta fast, like cutouts and combined them with what makes the Rocket Wide easy. We also added comfortable foot pads and more ergonomic footstrap positions. New for 2018 the Speedster comes with a foil-ready turttle box. With the Speedster, you can stop thinking about your board and focus on tactics to cross the finish line first.

FREERIDE BOARDS

FREERIDE

Freeriding captures the free spirit of windsurfing: flying around on flatwater with friends. The Rocket Wide is our modern freeride board focused on fast, high performance freeride. This is the board that our pro slalom sailors ride when they go windsurfing just for fun. The Rocket is more traditional with a longer outline providing a reliable, easy ride. For 2018, the Rocket comes in AST construction for a cheaper and more durable board. The Bullitt is a more economic option than the Rocket or Rocket Wide.

ROCKET WIDE

ROCKET

ROCKET AST

BULLITT

FREERIDE ROCKET WIDE

CONSTRUCTION
PVC FULL SANDWICH

ROCKET WIDE

Fast, Modern, Easy: The Rocket Wide is our gift to the modern freerider.

For Who:

Modern freeriders looking for a high performance and Foilers looking for a high-performance convertible option.

We wanted to make a faster Rocket, so we made it shorter, wider, thinner. The end result is a marriage of freeride and speed: fast in the straights, soft to ride and, easy to jibe. The extra width of the Rocket Wide increases planing surface for better acceleration and to carry speed through lulls which is good in gusty winds or on freshwater lakes. The width also helps to keep speed and balance during jibes. The slalom features in the tail, give the Rocket Wide enough speed to compete against race boards, all with a freeride comfort.

The Rocket Wide is now available in two sizes optimised for easy foil performance. Using the Rocket Wide's natural acceleration, the foil quickly produces lift and carries you out of the water and flying forward, even in light winds. The wide, flat deck offers comfort and control when riding the foil. Every board comes with a reinforced deep tittle foil box to withstand the increased pressures caused by the foil. When the wind gets stronger, switch the foil for the supplied G10 fin and experience the freeride magic of the Rocket Wide.

ROCKET LTD & CED

The Rocket is famous for being the most reliable and easy-to-use classic freeride board in the world.

For Who:

Everyone looking for an easy freeride board.

The Rocket offers the easy freedom of windsurfing. One of the favourite features of the Rocket is the signature "soft-touch" feeling as the board cuts through chop. The Rocket works with any kind of sail, from a no-cam wave sail to full-cam freeride. The Rocket planes easily even in light and gusty wind. The 115, 125 and 135 were refined for 2018 to better provide the classic combination of acceleration, maneuverability, and control. The Rocket will still be a test winner for years to come.

BULLITT

A durable, fun freeride board at an accessible price, the Bullitt offers performance freeriding to families and students.

For Who:

Freerider on a budget.

Easy to use, durable, and accessibly priced, the Bullitt is the perfect board for new windsurfers or as a family board that the kids can learn on and mum and dad can use as well. We took the smooth speed and easy jibing of the Rocket and adapted these features to work with a less expensive construction. We optimized the volume distribution for stability and easy balance. Even though it costs less, the Bullitt's AST construction allows the board to be resistant against the small dings that come from dropping a board or banging it against rocks.

Get on the water without breaking the bank; get on the Bullitt.

COOLRIDER

The feeling of flying on a windsurfboard is better than any other sport, but windsurfing is also very hard to learn. The Coolrider makes learning windsurfing easier for adults, kids and families.

Even though the board is very big for stability, the rails are relatively small to provide control, making the Coolrider a classic funboard that also works for longboard freestyle. The 230 Liter Coolrider features a double deck in the tail for extra maneuverability despite the large volume.

Inspired by the feedback from windsurfing schools all over the world, each Coolrider has a soft EVA foam deck that is comfortable when climbing on the board to uphaul. A handle on the nose makes the Coolrider easy to carry. And rubber protects the board from rocks.

The Coolrider is the perfect board for a light-wind summer day on the sea with the family.

UNDERSTANDING THE RANGE

The Tabou boards fit on a spectrum with maneuverability on one side and speed on the other. On one side is the DaCurve our professional wave board and on the other is the Manta, our pro slalom shape. The DaCurve is optimized for turning and the Manta for speed. And all the boards in-between are a balance of turning and speed.

The range looks like this:

You might notice that the Twister does not fit and that is because it is optimized for something else: popping, spinning, sliding—the foundations of modern freestyle tricks.
