Prolimit products are designed and developed in South Africa and the USA. Our products are tested worldwide and distributed on all continents.

PROLIMIT | TECHBOOK 2018

BRAND STORY

Leading by knowledge and passion, Prolimit develops innovative technology to build the most advanced and honest performing watersport products

Prolimit was founded in the Netherlands. We are represented in every single country in the world. Prolimit created champions in windsurfing and kiteboarding. Many of the best athletes in the world have found a fertile ground when it comes to working with the best product available. Looking back we are proud that so many young careers started with our products. Our product engineering is being led by our head-office in the Netherlands in close cooperation with our R&D and design office in Cape Town, South Africa. Talented designers joined our team and in the challenging conditions of the South African coastline. We spend more time on the water in all seasons while keeping the unique northern testing grounds in the Netherlands as well for sub zero conditions. We collaborate with experts from the USA and Taiwan for product technology, this technology is used in our products and have created long lasting and durable relationships with the best factories in the world.

WETSUIT TECHNOLOGY

NEOPRENE

Neoprene is a blown rubber laminated with fabric lining. Stretch is determined by the amount of air in the neoprene and the stretch of the laminated lining. The stretch direction of the lining also influences stretch.

LIMESTONE NEOPRENE

Our neoprene is made out of Eco friendly limestone neoprene. Limestone neoprene wetsuits are always more flexible, light, have exceptional thermal insulation with high stretch. This makes our wetsuits easy to take off, they have less drag and increased buoyancy for increased performance in above watersports. The maximum elongation of our high-grade neoprene is close to 500%, while human skin stretches to around 70%. This makes our wetsuits the most free moving wetsuits available.

LIMESTONE NEOPRENE, REACH COMPLIANT

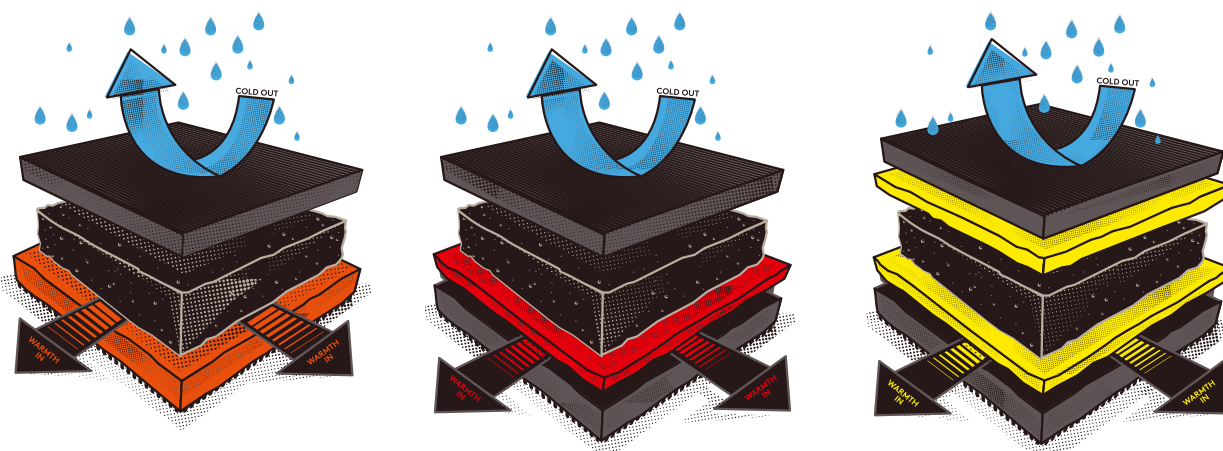

This means we have achieved to ban the use of extender oils in our neoprene sheets for a better environment. PAH neutral neoprene has improved characteristics such as weight, stretch and it prevents skin irritation that could be caused by extender oil residues or solvent containing glues and complies with the most strict rules for Restrict of Chemicals (Reach) as regards to polycyclic aromatic hydrocarbons.

AIRFLEX NEOPRENE

We feature three types of Airflex neoprene. 300+, 500% and 550+ stretch. Airflex neoprene is made out of limestone neoprene and by changing the formula of the foaming agents we can determine the stretch in our raw material. Laminating with the different backings is determining the final flex of the panels.

EXACT FIT AND OPTIMUM INSULATION

Precise seam and material placement for a tailored fit. Designed to fit your body without over-stretching the neoprene, which prevents stretched out thin neoprene and loss of thermal insulation.

KEEPS THE COLD OUT AND THE WARMTH IN

PROLIMIT TECHNOLOGY

POWERSEAM (PATENTED TECHNOLOGY)

A unique technology. Colored thin slick looking seams are triple glued and sealed off on one or both sides with a liquid rubber seal. The liquid seal reinforces the seams and prevent any water leakage. The advantage: Thin, colored, high wear resistant, watertight, super stretch seams and the ability to use it on skin surfaces.

FTM SEAM

FTM, our Fluid Taping Method seam construction. Triple glued seams with the outside of the seam sealed off by a wider black carbon neoprene seal. The inside of seam is protected by our glued and blind stitched technology. FTM seams are durable, watertight and keep high stretch.

FUSED NEOPRENE EDGES

Heat pressed neoprene edge for increased comfort and durability on our neoprene neck cuffs.

GLUED AND BLINDSTITCHED SEAMS

Triple glued panels are stitched together with a special stitching method. Partially puncturing the neoprene to keep the water tightness of the wetsuit seam. Each thread is protected by a tape at the end. Our perfect finish makes our glued and blind stitched wetsuit indestructible.

4D NEOPRENE

This material offers enormous stretch possibilities, a high wear outer surface and in combination with our aqua flow lining the softest material selection possible.

NEOLIGHT DUOTONE 550+ NEOPRENE

A Two tone fabric gives a different look to our product. Besides looks the extra yarns offer a softer, more stretch and a smooth feel to the outer lining. Always combined with the Airflex 500+ innerlining, this wetsuits are using the best possible blend on the market.

AQUA FLOW LINING

Water and wetsuits are closely connected with each other. Water should go in a wetsuit and adapt to the human body temperature. Aqua flow lining channels the water away from the body, keeping the suit warmer, lighter and easier to dry.

ZODIAC LINING

Velvet feel on the inside, provided by high tech woven lining which absorbs the water from the skin and increases comfort.

EXPERIENCE
INNOVATIVE
TECHNOLOGY

WWW.PROLIMIT.COM

BOOTS & SHOES TECHNOLOGY

PROLIMIT CREATED THE OCL LAST TECHNOLOGY, (ORTHOPEDIC CONTROLLED LAST). THE ADVANTAGE: BETTER FITTING FOOTWEAR THAN ANYTHING AVAILABLE ON THE MARKET!

History: By adding in more seam shape in our boots& shoes we found out that it did not gave us better fit. The reason; we were using the same last as all our competitors! The Alloy casted lasts determines the shape and fit of neoprene footwear. A neoprene sock is mounted around the last and rubber parts are joined together. The last goes into the oven for the rubber parts to cure, moulding all exactly around the last.

Solution: Realizing this we started the search for a better last. We found out that there are no lasts made for active water sports. All lasts available in the market are made for multi purpose usage; like for waders boots or fishing purposes which are static shaped profiles.

That made us to decide to build the best last possible for active water sports. Together with a Orthopedic specialist we analyzed different feet and came up with complete new last designs. In the design we incorporated the stretch of the materials, water influence and the dynamic positions of the feet during active water sport. Your feet are made of 26 bones and 214 ligaments! They need proper support! Also during active water sports.

OCL LASTS IS DIFFERENT!

Most of the Prolimit boots and shoes are built using our unique, Prolimit owned, OCL (Orthopedic Controlled Last). Nobody in the entire industry made the same effort to go this far! We created the best SHAPE and TECHNOLOGY in a neoprene boot or shoe.

PROFILED HEEL

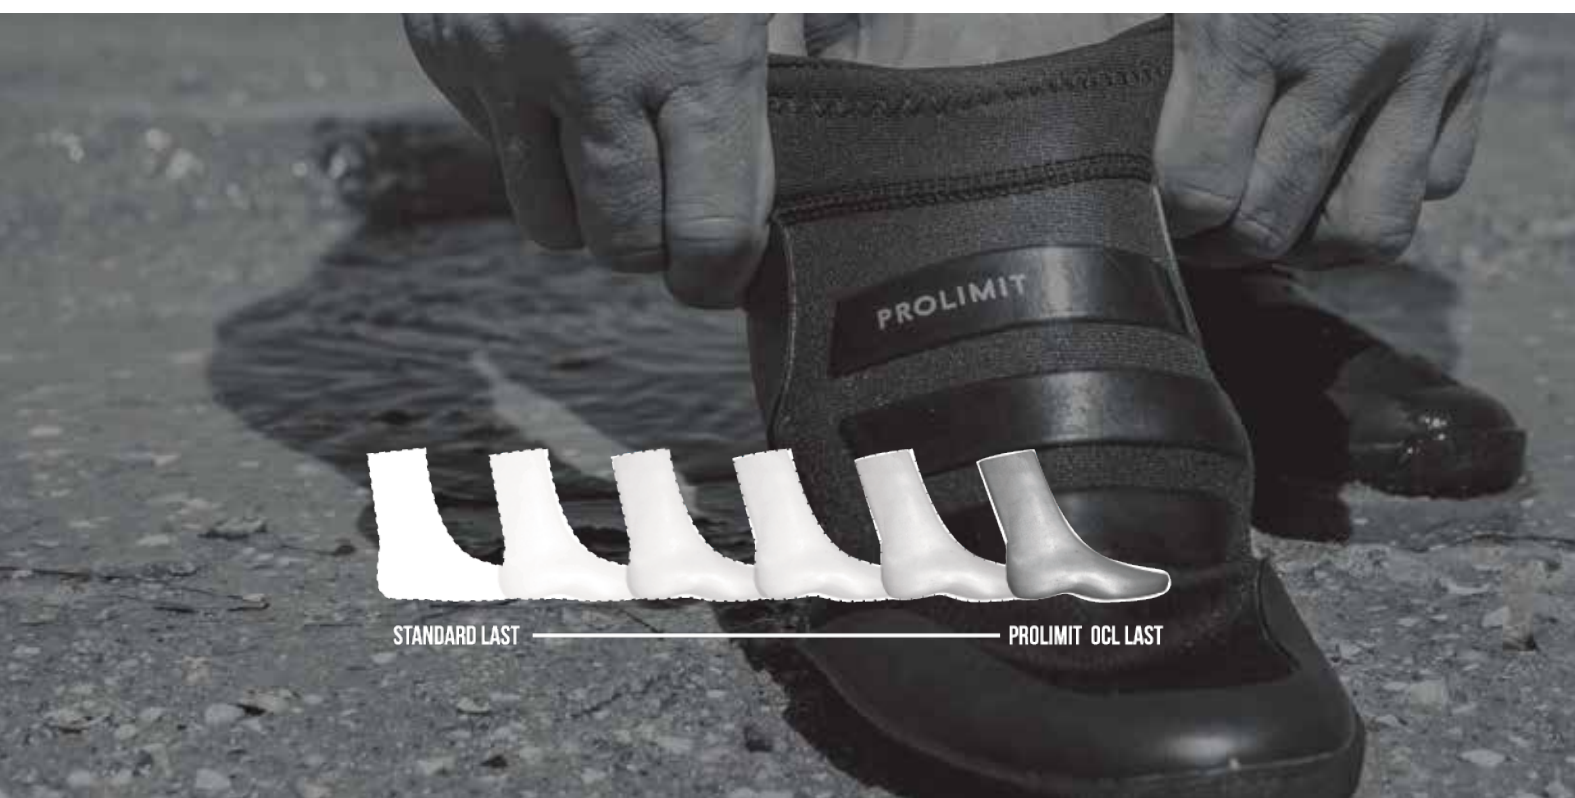

- Shaft is more raked back for the Dynamic position,
- The heel of our OCL lasts are much narrower closing nicely around your Achilles tendon and supporting it,

SWEPT FOOT PROFILE

- Our arch is lower to prevent rolling of the boot around your foot,
- Our sole foot arch is pre shaped to fit the natural position of the foot which is not flat

More important, OCL last build boots and shoes will have less water entry. You can hear the difference when filled up with water, while other boots suck in water. Neoprene is stretching in the water even more, all boots and shoes of other brands are sucking in water as boots and shoes are not fitting tightly enough around your foot. Prolimit OCL last build boots are making no noise at all. WHY? Simple, OCL last build boots are leaving no air space in the boot which can not be filled up by water! Shape and Technology! More function and better performance!

While all other brands in the market are using lasts made from fishing boots Prolimit took the effort to create something which is noticeable when using. We challenge you, do the test yourself!

EXPERIENCE

SUP TOP CONVERTIBLE 1.5MM FL

The Prolimt SUP Top Convertible 1.5mm is the most versatile top for your paddle sessions. It can be used as a zipped up top with front wind block for colder air, and can then be unzipped for a loose fit and front ventilation as you warm up. While unzipped, it supplies cross-ventilation from the front to the back mesh panels. Made from our PO2 fabric; Prolimit's quick dry non absorbing fabric. The panels under the arms are made of a thinner version of the PO2 fabric for more movement and breathability.

- PO2 fabric
- Flatlock construction
- Front ventilation panel for maximum breathability
- Features two zipper positions for heat regulation
- YKK zipper

SUP TOP CONVERTIBLE WOMEN

Stop overheating with the Prolimt SUP convertible top. A breathable mesh panel behind the zip makes it possible to start your session with the zip closed to keep warm and as soon as you warm up the zip can be opened to supply cross-ventilation from the front to the back mesh panels. The mesh panel keeps the top compact and stops the unzipped top from flapping around while paddling. The most versatile SUP-wear essential. Plush lined quick dry fabric in chest panels combined with vented breathable panels in armpit, side and parts of the back.

- Two zip positions for heat regulation
- Vented airflow panels
- Quick dry & Breathable
- Plush lined chest
- Flatlock seams
- YKK zip

EXPERIENCE
INNOVATIVE
TECHNOLOGY

WWW.PROLIMIT.COM

Neoprene wetsuits have remained unchanged since its original concept. This concept being a thin layer of water insulated between your body and the wetsuit. Body temperature is transferred into this water and insulated from surrounding weather conditions. Seals on cuffs, collar and zipper ensure that an excess of water does not enter the wetsuit.

WIND-CHILL

The human body loses heat largely through conduction and convection. The rate of heat loss depends on the wind speed over the surface, the faster the wind speed, the more readily the surface cools. By using a 1st layer (innersystem garment), water will remain against your skin and resist excess water entering. Added thickness and insulation contributes to extra warmth and wind-chill will have a minimal cooling effect. Comfort and manoeuvrability will also increase as the wetsuit and innersystem garment slide frictionless over each other.

PROLIMIT INNERSYSTEMS are made out of thin Limestone based neoprene. A high heat reflective Titanium layer optimizes heat retention.

DESIGN

- Ergonomic fit and stretch for ease of movement.
- Engineered body shaping follows the body curves to retain body heat.
- A variety of materials are used, specifically utilized in different parts of the garment.

HARNESS TECH

DEDICATED WINDSURF PRODUCTS

25 Years of evolution has focused our harness designs. We have relevant products that work seamlessly harnessing wind power and supporting and protecting the user.

- Prolimit harnesses are CAD designed around an anatomically correct 3D model.
- Pre-curved and 3D shaped structure and padding fits the rider's body without bunching or pressure points.
- 3D shaped pillow for the lumbar area has the correct shaped through 2 Axis.
- Structural flex zones allows the hard plates to flex with the riders body for active support.
- Stretchy Neoprene waist belt system molds to the body con tours for maximum grip. No riding up.
- Easy Belt waist belt is used on models where sliding is needed and low water absorption is important.

- 4-Point connecting points between the neoprene belt and the harness body for improved stability.
- Neoprene soft-edge runs full width to cushion the body from edge tension and stop chafe.
- Use specific belt and buckle systems are used. Quad belt system supports the spreader bar on high load harnesses. Duo-belt system supports the spreader bar in low side profile harnesses ideal for freedom of movement.
- PROLIMIT patented PIN RELEASE BAR system, "CLICK AND GO" is used on all our harnesses for quick fitting.
- P twist-free hook design.
- Use-specific outlines are used Wave, Freeride, Freestyle or Race. More area for high load or lower sides for more freedom. Higher backs for more load spread.

BOARDBAG TECH

We pay special attention to all our technical products, boardbags are a very important part of these technical products. For every sport we want to make the perfect bag. Windsurf-, Kite-, SUP- and Wakeboardbags include our line-up. All designed by people who face the common day problems of our end-consumers.

GUARANTEED FIT!

We continuously research the latest board shapes and dimensions and design our boardbags to fit these boards. We allow for extra width in the tail-end to adapt to the board thickness and footstraps but also extend te inside of the boardbag by 5 cm for a perfect fit. The size of the board, fits the boardbag.

- Flat boardbags (Sport) - we add 10cm to the width an 5cm to the lenght
- Side wall boardbags (Fusion) - we add 5cm to the width and 5 cm tot the lenght

TECHNOLOGY

We use different materials and simple solutions to everyday problems so we can assure our bags protect your gear in the best way possible.

- Cool white fabric used on the bottom of Sports boardbags keep the board cool in direct sunlight
- Cool silver used on the Fusin boardbags reflects light and the board extra cool in direct sunlight

- Heavy duty webbing stitched around the edge of the bags protects against rail damage
- Padded nose and tail reinforcements
- Heavy duty non corrosive zipper sliders
- Easy grip zipper pullers, ideal grip with cold hands

KITESURF BB SPORT TWINTIP

- 5mm foam padded bag
- Outlines shapes to fit most current twin-tip boards
- XL sizes fit most light wind twin tips
- Top constructed from heavy-duty 600D Polyester
- Adjustable shoulder strap
- Durable non-corrosive zippers

ASK FOR POSSIBILITIES

BOOM TECHNOLOGY

At Prolimit we take building booms seriously. Wave, Slalom, Freestyle, Freerace and Race sails all have different sail cambers and balance points along the boom. We have worked on using the right UIC boom bend curve for each size and discipline, allowing for overlap between disciplines either way.

Our smaller booms use a wave bend curve which favours an overhand grip for the front hand and suits the camber forwards design of sails in this range.

Our bigger booms favour a more camber rearwards bend curve. The race oriented models combine this bend curve with wider back-ends to suit even the most radical deep camber race sails.

MATERIAL ENGINEERING

Material use has been fine tuned to give the best combo of stiffness, durability, feedback and price. From aluminium tube, aluminium V-grip to carbon, these combinations result in the right boom for the right application.

FRONT END

Our much copied front end still sets a standard for solid stability and easy of use. The no flex design will still be solid years down the line.

PRO BOOM

High performance boom: developed for maximum strength and functionality.
Specific boom profile and monocoque construction

- 29mm Diameter with 1.5mm wall thickness
- Made from T8 Easton Alloy, 2 piece construction
- Continious alloy front and back end to optimize stiffness.
- Double pin adjustment sytem for easy adjustment
- 60cm adjustment for maximum sail range coverage
- Axial boom head with intergrated skinny adapter

ASSAULT

Our V-grip boom. This extruded profile aluminium tube sets the standard for stiffness and comfort in smaller diameter booms. The tapered and ovalised inside section of the boom is more ergonomic than a circular section, reducing fatigue and arm pump. Featuring a 29mm Diameter with 1.5mm wall thickness made from T8 Easton Alloy. The Assault has 60cm adjustment for maximum sail range coverage. The Prolimit Assault boom means more power and less effort.

- Specific boom profile constructed from continuous alloy tube
- 29mm tubes, T8 alloy in 1.8mm wall thickness
- Carbon back-end for maximum stiffness
- Double pin adjustment
- 50cm adjustment for maximum sail coverage
- 2 piece construction
- Axial boom head with intergrated skinny adapter

COLOURS	CODE

SIZES
140-200, 160-220, 180-240, 200-260

TEAM C100 CARBON

The Prolimit Team Carbon C100 boom is our full carbon monocoque boom. The C100 140 is a full RDG 24,5mm boom, other sizes are 26mm. Continuous carbon frontend and carbon backend gives you the stiffest boom construction available. This is the boom for thepro's, wave or slalom!

- Specific Boom Profile curve
- 24.5mm reduced diameter grip area for the 140
- 26mm reduced grip area for the other sizes
- Double pin adjustment
- Axial boom head with intergrated skinny adapter

ROPE BAR

The Prolimit Ropebar transforms any wastharness into a waveharness with sliding hook technology.The chickenloop is directly connected to the ring on the rope and a gives you an optimal body position when riding waves.

The multiple connection points offer a broad range of compatible webbing systems, making it compatible for not only Prolimit harnesses but for any other brand as well.Of course the Rope Bar is equipped with our patented Pin release system.
